

Why CoreCases is Right for Your Institution.

- **Standardized and Consistent**
- **Objective Assessments**
- **Flexible and Efficient Education**
- **Complimentary to Existing Activities**

Additional New Cases:

- **Eating Disorders**
- **Opioid Addiction**
- **Transgender Care**
- **Well-being**

- A standardized curriculum of 50 “Virtual Patient Cases” describes hundreds of Family Medicine disease states. Every learner cycles through all topics for a consistent experience.
- Competencies and Milestones are mapped to the content within cases, providing an objective assessment of a learner’s proficiency in real-time with uploadable reports.
- Self-directed content is minimal work for faculty, and physician trainees have the flexibility and autonomy to access and re-access topics as needed to learn important skills.
- Complimentary to existing activities and easy to implement. Our team helps tailor CoreCases to your needs (for individuals, group didactics, and flipped-classrooms).
- New cases in timely, but difficult to teach areas like transgender care, opioid addiction and eating disorders.
- Now includes an “**Introduction to CoreWellness.**” Three well-being modules on burnout syndrome, resilience, and wellness, plus 2 real-life simulations help physician trainees cope with the unique demands of the healthcare profession.
- Keeps learners engaged with 1,000+ multimedia elements including procedural and communication skills videos, clinical images and original medical illustrations.
- Provides the latest in technology-enhanced education: “Virtual Experts” provide in-depth formative feedback when learners need it; a Journal Club article in every case promotes ongoing discussions that reinforce clinical decision-making.
- Developed by Family Medicine experts to support AFMRD educational objectives and ACGME Competencies and Milestones. Contains over 1,000 related references, and 500+ board-style questions in the form of a summative assessment.

CORECASES FOR FAMILY MEDICINE CURRICULUM

No.	Case Title	Description of Presenting Complaint	PGY1	PGY2	PGY3
R3003	Otitis Media	20-month-old female with a runny nose and acute onset of fever and coughing.	●		
R3004	Pneumonia	77-year-old male presents to the office with a 3 day history of cough and fever.	●		
R3005	Upper Respiratory Infection (URI)	34-year-old male presents with a productive cough.	●		
R3007	Hyperlipidemia	56-year-old male returns to discuss screening test results.	●		
R3016	Obesity	46-year-old obese G1P1 with type 2 diabetes and suboptimal weight loss	●		
R3017	GERD	45-year-old male presents with chest pain that begins shortly after eating.	●		
R3020	Eczema	5-month-old male with a facial rash.	●		
R3022	Depression	42-year-old female presents with fatigue and sleep disturbance.	●		
R3023	Prevention/Immunization	61-year-old female with three days of shortness of breath	●		
R3029	Urinary Infection	18-month-old female with fever	●		
R3034	Headache	29-year-old male complains of recurrent, acute left-sided eye pain.	●		
R3036	Polypharmacy	76-year-old male with multiple medical problems and acute symptoms.	●		
R3037	Appendicitis	21-year-old female with acute abdominal pain and fever	●		
R3038	Shoulder Dystocia	28-year-old G4P3 female with first prenatal visit at 28 weeks gestation	●		
R3040	Premature Rupture of Membranes	24-year-old G1P0 at 38 weeks gestation with leakage of clear fluid from her vagina	●		
R3002	COPD	60-year-old male with a minimally productive cough.		●	
R3006	Heart Failure	71-year-old male is seeing you today for follow-up of myocardial infarction (MI).		●	
R3008	Hypertension	58-year-old following up for blood pressure check and test results.		●	
R3010	Ankle Injury	27-year-old female is seeing you today for ankle pain.		●	
R3011	Back Pain	57-year-old female is seeing you today complaining of back pain.		●	
R3014	Diabetes	31-year-old African American female following up to discuss test results.		●	
R3015	Hypothyroidism	62-year-old female is seeing you today to discuss her lab results.		●	
R3019	Shingles/Herpes Zoster	67-year-old male with itching and mild discomfort on the right side of his neck and chest.		●	
R3021	Anxiety Disorder	47-year-old female with mood changes and sleep deprivation		●	
R3027	Vaginitis/STD	24-year-old G1P1 with two weeks of vaginal discharge and spotting.		●	
R3032	Hearing Loss	72-year-old female concerned with possible hearing loss		●	
R3033	Cervical Neoplasia	32-year-old G1P1 with inter-menstrual spotting and watery vaginal discharge.		●	
R3041	Post-Term Pregnancy	19-year-old female G1P0 who presents with a complaint of decreased fetal movement		●	
R3043	Antepartum Care & Assessment	38-year-old Caucasian G2P0010 at 8 weeks 5 days presents with an episode of light bleeding		●	
R3001	Asthma	41-year-old female with new onset of non-productive cough and mild shortness of breath.			●
R3009	Syncope	64-year-old male presents to the ED after fainting.			●
R3012	Carpal Tunnel Syndrome	38-year-old female complains of numbness and pain in her right hand.			●
R3013	Tendonopathy (Rotator Cuff)	67-year-old female with left shoulder pain			●
R3018	Constipation	67-year-old female with abdominal fullness and increasingly persistent constipation.			●
R3024	Cross-Cultural Issues	71-year-old female is seeing you today for a left breast mass			●
R3025	End-of-Life Care	80-year-old Caucasian female with end-stage congestive heart failure.			●
R3026	Contraception	43-year-old G2P2 desires to start a new contraceptive method.			●
R3028	Anemia	74-year-old female is seeing you today to discuss her lab results.			●
R3030	Dementia	82-year-old male comes to the office accompanied by his wife.			●
R3031	BPH/Prostatic Hyperplasia	73-year-old male complains of a gradual onset of difficulty with urination.			●
R3035	HIV in Pregnancy	27-year-old G3P0020 at 7 weeks by LMP presents to obstetrics with a persistent sore throat.			●
R3039	Preterm Labor	23-year-old G1P0 at 26 and 5/7 weeks gestation who presents mild cramping			●
R3042	Postpartum Hemorrhage	34-year-old G2P1 who presents at 40+ weeks and has an arrest of labor at 6cm			●
R3044	Immediate Care of the Newborn	29-year-old G3P2 at 38+weeks develops a non-reassuring fetal heart tracing during labor			●
